Dear Fellow Gardeners:

I am writing to you from Fordhook Farms. It is in between seasons for gardening but good gardeners always think ahead and make their plans long before planting time.

To grow your seeds, we have to think years ahead. To create a new vegetable or flower, it often takes us years of careful work. But however hard and long the work may be, it gives us pleasure and we hope you enjoy growing our seeds in your garden.

You are to be congratulated on your part in the war effort. You, men and women of all ages, have cultivated more than twenty million Victory gardens; without the vegetables from your gardens there would not have been enough food in America.

Surely you will continue to grow vegetables, for food is one of the first necessities of life. When the last war factory is closed down, there still will be need for food. And no food tastes so good as the vegetables fresh from your own garden. They contain more vitamins and are better for you.

After these years of war, there is also a real need for flowers. For the sake of all that is good in the world, surround your home with the refining and uplifting influence of flowers.

I am sure you will understand that because of the paper shortage, it has been necessary for us to reduce the number of pages in this catalog. However, all the best vegetables and flowers are included for planting in 1945. Make sure of getting the seeds you need by ordering early.

Gardening is the first occupation of civilized man and everybody knows, now more than ever before, that Americans are good gardeners. You have done a magnificent job during the war years!

Wishing you personally a very successful garden in 1945,

Faithfully yours,

David Burpee

President

GROWING
AND
TESTING
BURPEE
SEEDS

The wives of soldiers do the handwork on flowers on Burpee's Floradale Farms. They are morale builders, serving the nation at war.

Bill Hoag, manager of Burpee's Floradale Farms, is one of the most expert seed growers in the world. He is shown inspecting the carrot trials. He eats them raw for flavor and vitamins.

Petunias and all other important garden flowers are selected and scientifically bred at Floradale.

Burpee's Famous FORDHOOK and FLORADALE Seed Farms

At Fordhook and Floradale Farms, Burpee experts make complete records of the growth of both flowers and vegetables from the time the seed is sown until they have reached full maturity. It is from these records that we not only get our descriptions for this catalog, but are able to include other valuable information such as the average number of days to maturity for each variety of vegetables, and the varieties we especially recommend by marking them with the Bull's Eye.

If you are not thoroughly posted as to which varieties of vegetables to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most reliable under varying conditions.

☉ We have used this symbol for years to guide the gardener in the selection of vegetables which we believe will give the best results under all conditions of soil and climate. This mark ☉, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the **best of their class.**

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be started, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average and some variation is to be expected, depending on the season, locality and time of sowing the seed.

Burpee's Cultural Leaflets, Free on Request

"How to Grow" directions are printed on every bag of Burpee's Seeds which, if followed, should produce satisfactory results, provided that soil and weather conditions are favorable and plants are properly cared for throughout the growing season. Some grow-

ers, however, are in need of special or more detailed information on certain subjects and the following instructive leaflets are free if asked for when ordering your seeds. You need not write out the full names; give the number we have assigned each leaflet.

370 BURPEE HYBRID CUCUMBER

60 days. High resistance to bacterial wilt, mosaic, and downy mildew are the outstanding attributes of this new hybrid white spine, slicing type cucumber. Vines are extremely vigorous, long lived and bear an abundance of well formed green fruits of handsome appearance, 8 in. long, $2\frac{1}{4}$ in. wide, square at both ends with medium seed cavity and crisp, white flesh of excellent quality. In our trials, the Burpee Hybrid Cucumber produced a higher total yield and a larger percentage of fancy fruits than open pollinated varieties grown right alongside because the vines remained green and healthy, and continued to produce their fruits long after the others had ceased.

Pkt. (30 seeds) 25¢.

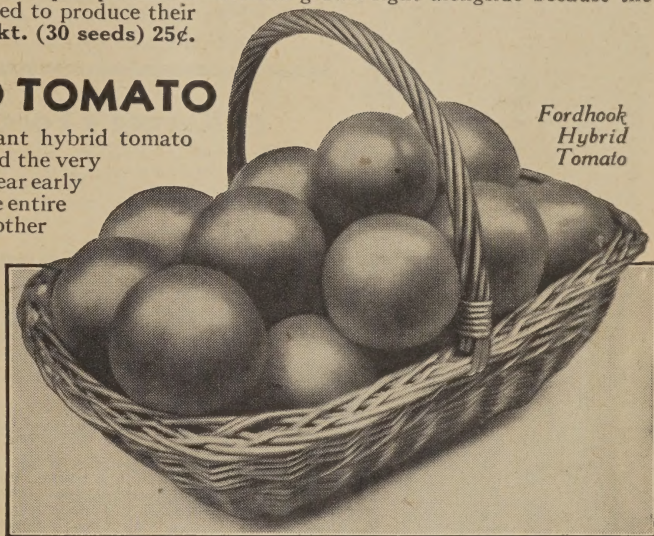

1121 FORDHOOK HYBRID TOMATO

60 days. A new early, everbearing, wilt resistant hybrid tomato noted for its uniformly shaped, smooth fruits, and the very heavy yield of the vigorous vines which begin to bear early and continue to produce profusely throughout the entire growing season. At Fordhook, it outyielded all other varieties for the year. Under general field conditions, the fruits are of medium size, averaging 5 ozs. in weight and larger when staked; oblate to globular in shape, an even scarlet-red in color, and mildly acid sweet in flavor. Plants are strong growing, spreading, semi-upright, with dense foliage which affords protection from sun scald.

Pkt. (30 seeds) 25¢.

Burpee Hybrid Cucumber is the first hybrid cucumber and **Fordhook Hybrid Tomato** is the first hybrid tomato seed ever offered to the public; both were originated on Burpee's Fordhook Farms in Pennsylvania.

1376 BURPEE'S RED TAMPALA—Better than Spinach

Burpee's Red Tampala

Burpee's Red Tampala (Tăm-păl'-a) is equal in all respects to Burpee's Tampala, introduced by us last year, but instead of the leaves being green they are variegated green and red, the red extending out along the veins of the dark green leaves whose underside also is red. When cooked, prepared, and served like spinach it is attractive, appetizing, and most delicious. Has double the Vitamin A content of spinach.

Tampala is easy to grow and does well in hot weather. Sow seeds outdoors any time after the ground becomes warm. One sowing usually produces enough greens for the season. However, for a continuous supply of the most tender leaves, make several successive sowings, ten days or two weeks apart, and use the entire plants when 5 or 6 in. high. If plants are allowed to grow, they become quite large as shown in the picture. When this size, break off clusters of leaves at tip of branches; then the plants will continue to produce all summer. Pkt. 25¢; 2 pkts. 45¢; $\frac{1}{8}$ oz. 75¢; $\frac{1}{4}$ oz. \$1.25; oz. \$4.50.

STRINGLESS GREEN-POD BUSH BEANS

10 Burpee's Stringless Green-Pod

Has long been considered the standard of quality for all beans

49 days. The attractive green pods are about 6 in. long, slightly curved, so thick, even when quite young, as to be double-barreled, and, when fully grown, the pods are meaty and juicy, entirely stringless. Always tender, brittle, and of the finest flavor. The plants are medium large, spreading, with dark green foliage; they are of strictly bush form, enormously productive and have yielded remarkably well under adverse conditions. Seeds are a dark coffee-brown color.

A favorite for home use as well as for canning, freezing and commercial planting. When introduced in 1896, it was the only stringless green-pod bush bean in existence. A great bean with a long and respected history, parent of many varieties and still prized for its quality.

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

22 Burpee's Fordhook Favorite—White seeded, round

52 days. Pods 5½ in. long, round, meaty, medium green, perfectly stringless and fiberless, extremely brittle and juicy. Quality is excellent. Seeds are pure white, and if allowed to ripen are useful for soup or baked beans during the winter. Plants are of stocky growth and very productive. A favorite two-purpose bush bean which we can highly recommend.

The seed crop is very short this year; can offer pkts. only. Pkt. 15¢.

23 Giant Stringless Green-Pod—Widely planted

51 days. The medium-green pods grow 6 to 6½ in. long; meaty, round, slim, slightly curved, brittle, and absolutely stringless. Seeds are a light brown color. The plants are of strong growth, compact, and bear a heavy crop of pods for a long time. Fulfills the same purpose as Burpee's Stringless Green-Pod for the home market, freezing and canning. Pods are, however, not so thick, and lighter green in color. Their appearance in market is unusually attractive. Productive and adapted to the entire United States.

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

27 Tendergreen—Very long, round, tender, meaty pods

53 days. Extremely meaty, smooth, dark green, round, tender pods, 6 to 7 in. long, straight to slightly curved and of the most delicious flavor. Absolutely stringless at all stages of growth and always free from fiber. Pods mature early and are borne profusely for a long time. Wonderful for home and market; ideal for canning, freezing and shipping. Each year sees the use of Tendergreen on the increase and with good reason—pods are very long, plump, smooth, with excellent color and quality; a bean you should grow.

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.10.

39 Plentiful—Long, thick, flat pods; early and a heavy cropper

51 days. The pods are flat, thick, straight to very slightly curved, medium green, 6 to 7 in. long, fairly smooth, stringless and of good quality. The plants are most prolific, and make a strong growth even when conditions are not favorable for best results. Growers of shipping beans should certainly give Plentiful a trial as well as home and market gardeners wanting an early, flat green-pod bean. Black seeded. *All-America Bronze Medal Winner.*

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.10.

51 days. Dark green pods, 6 to 6½ in. long, semi-round, brittle, smooth, and entirely stringless at all stages. Sure cropper, even under adverse conditions, and on all types of soil. Seeds are jet-black. Of considerable commercial importance because of the fine appearance of the pods and their good keeping qualities. Desirable for the home garden and may be used for freezing. Suitable for home garden, commercial growing and freezing. Seeds fawn, blotched dull red. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

How to Grow Bush Snap Beans

Plant seed when danger of frost is past and the soil is quite warm, in rows 18 to 30 in. apart for hand cultivation or 2½ to 3 ft. apart for field cultivation. Make furrows about 2 in. deep and space the beans 2 to 3 in. apart in the row. Cover with fine soil and firm the soil over the seed with your foot or the back of a rake to insure good germination. When plants are 2 or 3 in. high, thin to stand 4 to 6 in. apart in the row. The pods are most delicious if picked when quite young and tender—never wait until they have reached full size. For a continuous supply make repeated sowings every 2 weeks, allowing plenty of time for the last sowing to bear before frost. Plants grow 15 to 20 in. tall. One pkt. of seed will sow about 25 ft. of row; one lb., 150 ft.

BUSH SHELL BEANS *(may be used either green or dried)*

Grown mostly as dried beans for winter use; the pods of Dwarf and French Horticultural may be used, when young, as snap beans. The culture is similar to that recommended for bush beans on page 4, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. One pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many varieties of pole beans, listed on page 7, are also desirable as shell beans.

29 White Marrowfat 100 days. The pods grow $4\frac{1}{2}$ to 5 in. long, flat, nearly straight, and well filled with 5 and sometimes 6 large white beans valued for baking.

Wax or Yellow-Podded Bush Beans grow vigorously almost anywhere, present no difficulties of cultivation, and produce tremendous crops. Their appetizing, waxy yellow pods and their delicate, distinctive flavor make them a favorite in market or home-garden. The planting information given for Bush Beans on page 4 applies to the Wax-Pods and Green-Pods alike. The bushes range in height from 12 to 20 in. Most gardeners arrange to have plantings of both the green and wax-pod beans made so as to have the two always on hand; this makes for a nice change when serving at the table.

BURPEE'S POLE BEANS

72 Kentucky Wonder (Old Homestead) ☉

65 days. Most popular and dependable throughout the country. It is early, climbs well, and bears a heavy crop of large, green, curved pods, 7 to 9 in. long, in clusters. These strings do not impair the quality of the pods so that they can be eaten until late in the season. Though thick, the pods appear slender on account of their length. The light brown seeds have a tasty flavor which makes them desirable for use as shell beans. **Pkt. 10¢; ½ lb. 25¢; 1 lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.**

Kentucky Wonder Pole Beans

How to Grow Pole Beans

Pole Beans are extremely productive. They come into bearing later than the bush varieties, bear for a longer period, and some produce bigger pods. They are less hardy, however, so should not be planted until all danger of frost is past and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles. Place 5 to 8 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles. Pole Beans may also be planted along a trellis or fence, sowing 300 ft. of row with 1 lb. of seed.

EDIBLE SOY BEANS

Plants are extremely productive, vigorous and upright growing, 2 ft. or more high and do not require support. Pods are not edible; shelled beans are delicious, when eaten green or dry, and are an excellent source of Vitamins A, B, and G. Suitable for freezing. A pkt. will plant 25 ft. of row; 1 lb. 150 ft.

35 Bansei 96 days. One of the earliest and most productive; it will produce crops in nearly any section of the country. The plants are literally loaded with pods, each containing 2 or 3, oval shaped, bright green beans which turn yellow when mature. **Pkt. 10¢; ½ lb. 25¢; 1 lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.**

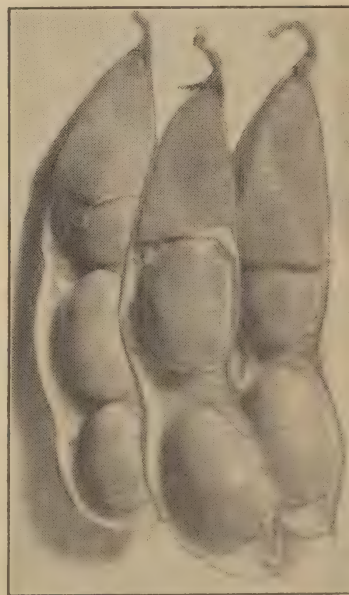

37 Funk Delicious 105 days. Pods contain two and sometimes three beans, as large as baby limas in the green shell stage; pale green as they come from the pod and a beautiful bright green when cooked. Dry seed is large, round and straw-yellow in color. **Pkt. 10¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.**

46 Mendota 90 days. Resistant to crinkle virus, a destructive disease in many locations. Pods contain 2 or 3 seeds, bright green when immature, straw-yellow when mature. **Pkt. 15¢; ½ lb. 35¢; 1 lb. 65¢; 2 lbs. \$1.20; 5 lbs. \$2.75.**

FAVA BEANS

Mammoth pods with 5 to 7 lima-like beans

24 Long Pod 85 days. Much hardier than other beans. Pods are glossy green, 7 in. long, and quite broad; they contain 5 to 7 large, broad, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble Lima Beans and should be used in the same way. Flavor is somewhat like that of the pea. A pkt. will plant 15 ft. of row; 1 lb. 100 ft. **Pkt. 10¢; ½ lb. 30¢; 1 lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.**

BURPEE'S BUSH LIMA BEANS

65 Burpee's Fordhook Bush Lima ©

Introduced by Burpee; named for Burpee's Fordhook Farms

75 days. **Burpee's Fordhook** is known and grown wherever beans are planted. It is the leading variety of bush lima beans, and in the important commercial bean growing sections it is usually the only variety grown; this surely shows its desirability.

The plant is bushy, upright, with large leaves of heavy texture, 20 in. or more in height, with a spread of 2 ft. or more, very vigorous, with many pod-bearing lateral branches. Pods are borne close to the plant and often on the ends of the branches. They are 4 to 5 in. long, 1 to 1½ in. wide, and ¾ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans of a delicious flavor, not unlike chestnuts. Seeds hold their green color until quite old; cream colored when ripe.

The dry, mealy quality of Fordhook is familiar to every one who uses lima beans. The beans are large, and there is, therefore, less waste in shelling than with other varieties. Its bearing season is long and a planting may be picked for a month or more. Fine quality, always salable, attractive appearance, and large pods allow us to say that in bush lima beans, Fordhook is the best for home garden, freezing or commercial use.

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

63 Burpee's Improved Bush Lima ©

75 days. The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The pods are larger, the individual beans, either green or dry, are nearly twice as thick, and the plants are more productive, large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 4½ to 5½ in. long, and 1 to 1½ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of fine quality; good for freezing. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with it.

Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.

60 Burpee's Bush Lima

78 days. The original dwarf, large-seeded bush lima. First introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth and branch most vigorously. Pods grow 4½ to 5 in. long, 1 to 1¼ in. wide and contain 3 or 4 large beans of the highest quality. Suitable for freezing.

Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

68 Wood's Prolific

Bush Lima

68 days. **Improved Henderson Bush or Baby Lima.** Being early maturing, it is especially desirable in northern states where growing seasons are short. Pods are small, 3 to 3½ in. long, ⅞ to 1 in. wide, each containing 3 or 4 flat beans of delicious, sweet, buttery lima flavor; desirable for freezing. Plants are truly prolific, and while they begin to bear very early, they will continue to produce until killed by frost.

Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

61 Baby Fordhook Bush Lima—Small, thick beans

70 days. A thick-seeded or "potato", small lima bean of far better quality than the flat type. It was designed especially for canning and freezing; home gardeners, too, will appreciate its surprisingly heavy crop of pods. Plant is truly bush, about 14 in. tall. Pods are 2¾ in. long and ¾ in. wide, thick, slightly curved, containing 3 or 4 beans, close but not crowded in the pod. Seed is green turning cream when dry.

Pkt. 15¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.10.

Burpee's Fordhook, the leading thick or "potato" bush lima bean for nearly 40 years

69 Burpee's Super Green Bush Lima

74 days. A baby bush lima with beans that retain their green color until they are fully matured. Pods are 3 in. long, and contain three, sometimes four, green beans; desirable for freezing. The yield from a given number of pods exceeds that of other baby lima varieties.

Pkt. 15¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 85¢; 5 lbs. \$2.00.

71 Thorogreen Bush Lima

68 days. The plants are dwarf, dark green, erect, bushy, and set a prolific crop of flat pods containing 3 or 4 flattish, oval shaped beans of a dark green color which is held for a long time. At maturity the seeds retain a pale green color. Valuable for canning and freezing.

Pkt. 15¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 85¢; 5 lbs. \$2.00.

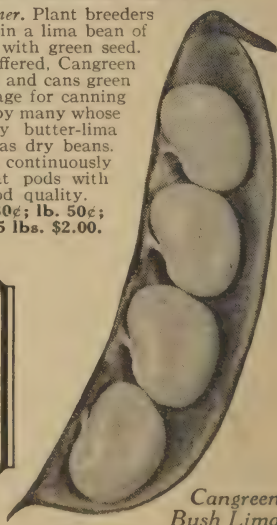

64 Cangreen Bush Lima

72 days. **All-America Winner.** Plant breeders have been working to obtain a lima bean of the Henderson Bush type with green seed. Several varieties are now offered, Cangreen being one of them; it cooks and cans green which is a distinct advantage for canning and freezing and preferred by many whose preference is for the baby butter-lima beans for eating fresh or as dry beans. Plants are dwarf, bearing continuously throughout the season flat pods with 3 or 4 green beans of good quality.

Pkt. 15¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 85¢; 5 lbs. \$2.00.

How to Grow Bush Lima Beans

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. Pick the pods as soon as the beans have reached edible size. They are more easily raised than the pole limas but do not yield as much on the same amount of space. A pkt. of large-seeded varieties will sow 15 ft. of row; one lb. 100 ft.; the small-seeded kinds will, of course, go much farther.

Cangreen Bush Lima

BURPEE'S POLE LIMA BEANS

106 Burpee's Improved Giant Podded ☉

90 days. The largest podded of all pole limas. The pods are truly enormous, 7 to 8 in. long, $1\frac{1}{2}$ to 2 in. wide, with five and sometimes six extra large, flat, green beans of the most delicious flavor; excellent for freezing. Vines are vigorous growing; attain a height of 10 to 12 ft. and freely produce their pods in clusters of 4 to 8 from the bottom to the top of the poles. Pickings may be made continuously from midsummer until vines are killed by frost. A marked improvement over Giant Podded. Carefully selected for uniformity, length of pod and productiveness. We can recommend it highly for both home and market use especially to growers having a local trade. Size of pods and beans always commands highest prices. **Pkt. 15¢; $\frac{1}{2}$ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.**

95 Burpee's Sunnybrook

90 days. Its popularity is due to the large sized pods and tremendous yield, each spike carrying from 5 to 10 pods which are closely packed with 4 and often 5 large, thick, meaty, light green beans of the finest quality. Pods grow 7 in. long and $1\frac{1}{4}$ in. wide; the beans retain their green color for quite a long time. **Pkt. 10¢; $\frac{1}{2}$ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.**

99 King of the Garden

88 days. A strong grower and uniformly large podded. The pods are from 5 to 7 in. long and contain 5 and often 6 large beans which are easily shelled, of handsome appearance and excellent quality. Pods are borne most profusely until frost has killed the vines. One of the leading pole lima beans for freezing, home and market gardeners. **Pkt. 10¢; $\frac{1}{2}$ lb. 30¢; lb. 50¢; 2 lbs. 95¢; 5 lbs. \$2.25.**

103 Carolina or Sieva

78 days. The vines quickly produce a fine crop of small, attractive pods, $3\frac{1}{2}$ in. long, each with 3 or 4 small, flat, green beans of splendid quality. Especially valuable in cooler sections of the country where the large seeded varieties are too late to produce well and in localities with hot, dry summers where pods often fail to set.

Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

102 Florida Speckled Butter

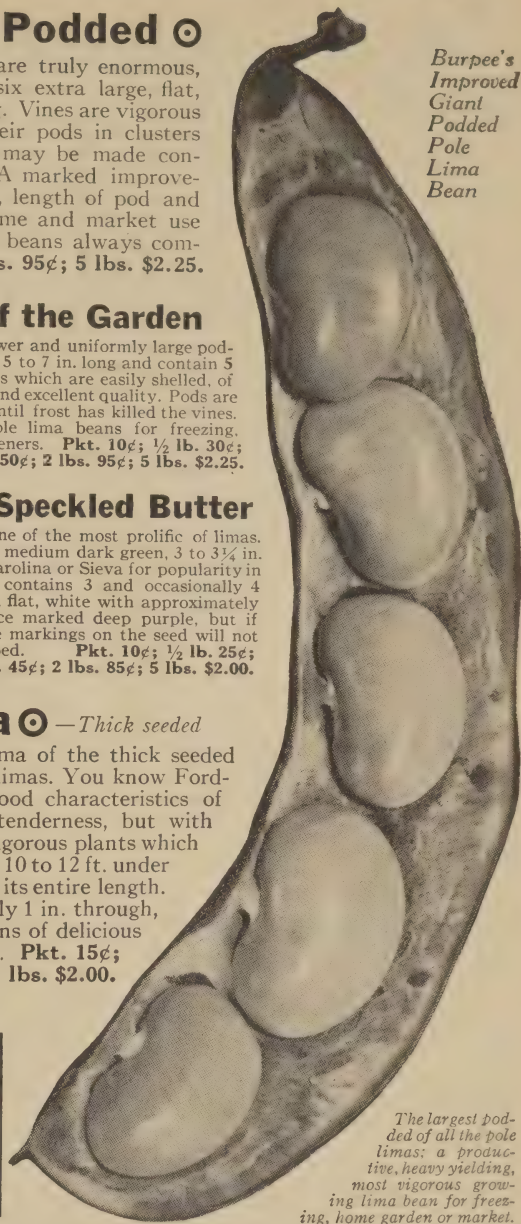

78 days. Considered one of the most prolific of limas. Vigorous plants; pods medium dark green, 3 to $3\frac{1}{4}$ in. long, and vying with Carolina or Sieva for popularity in the South. Each pod contains 3 and occasionally 4 beans, which are small, flat, white with approximately one-third of the surface marked deep purple, but if picked when young, the markings on the seed will not yet have been developed. **Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.**

105 Burpee's Best Pole Lima ☉ — Thick seeded

92 days. Represents a marked improvement over any pole lima of the thick seeded or "potato" type; it is truly the Fordhook among the pole limas. You know Fordhook—its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each of the vigorous plants which are strong growing, natural climbers. Burpee's Best will climb 10 to 12 ft. under average conditions, and produce pods in clusters of 4 to 8 along its entire length. The pods are straight, 5 to 6 in. long, $1\frac{1}{2}$ in. broad, and nearly 1 in. through, well filled with 4 or 5 and sometimes 6 big, thick, plump beans of delicious flavor; fine for freezing. Recommended for home and market. **Pkt. 15¢; $\frac{1}{2}$ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.00.**

How to Grow Pole Limas

Pole Lima Beans are easily grown in any rich, well-drained garden soil. Should be given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (eyes down) around each pole, cover with 2 in. of fine soil and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row.

The largest podded of all the pole limas; a productive, heavy yielding, most vigorous growing lima bean for freezing, home garden or market.

BURPEE'S RED BEETS

115a Detroit Dark Red, Short Top ⊙

60 days. An improved and refined strain of Detroit Dark Red. It has tops which average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. Skin is dark red; flesh is uniform deep red with the zones so inconspicuous that the flesh, when cooked, seems to be one solid ball of deep blood-red. Smaller tops allow beets to stand closer together in the row.

Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75.

115 Detroit Dark Red, Medium Top

59 days. An early maturing beet of remarkable uniformity. Splendid for the home garden, market, shipping, freezing and canning. Perfectly round and of a deep red color. They reach 2½ to 3 in. in size and have a small collar and a thin tap-root. The flesh is very dark blood-red, showing hardly any zones. It is tender; fine grained, exceptionally sweet. Medium size foliage makes it popular with market growers, requiring a large top for bunching or for housewives wanting plenty of "tops" for use as "greens." Roots are slightly larger than the short top strain offered above.

Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75.

128 Burpee's Improved Blood Turnip Beet

59 days. The large beets, 3 to 4 in. across, are round but sometimes deeper than their diameter. The flesh is dark red, occasionally zoned. Though it is a quick grower, the roots will keep a long time in storage. A splendid variety for the home garden and for market gardeners; it is dependable in every way. Flesh is fine grained, tender and most agreeably sweet. It may be grown for early use, summer, fall or winter storing as well as for canning. Because of its quickness of growth, it is especially suited for late sowings. It is really an all-season, all-purpose, deep red table beet of high quality that we can recommend to every one.

Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

120 Winter Keeper—Stores well; sweet and tender all summer and winter

80 days. A "long season" beet which remains solid and tender all summer and also when stored for winter. As the half-long-shaped roots grow slowly, it is valuable as a late beet, and you will find the Winter Keeper firm and sweet when most others are past their prime. Skin is dark red as is the flesh. Even when the beets get large, they are as tender as much earlier varieties. Home gardeners appreciate its quality; growers selling direct find it a ready seller. Seed crop is very short this year. Pkt. 10¢; oz. 30¢.

121 Burpee's Red Ball ⊙—Pictured in color on front cover

60 days. Red Ball is remarkable for its uniform shape, deep colored flesh, and fine sweet flavor. The roots are deep, globe-shaped, growing to 3 in. in diameter, and having a smooth, deep red skin. The flesh is also extremely dark red, free from woody fiber, and very tasty. The quality is always the finest. Thousands of home and market gardeners grow it annually to their profit and entire satisfaction. Its intense dark red color especially fits it for freezing and canning. Medium tall tops. Pkt. 10¢; oz. 30¢; ¼ lb. 95¢; ½ lb. \$1.75.

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make repeated sowings 3 to 4 weeks apart allowing plenty of time for the last sowing to mature before frost. Sow seed in rows 1½ to 2 ft. apart and cover with ½ in. of fine soil. A rich, sandy loam, mellow and deep, produces the best shaped and smoothest roots. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Dig the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. A pkt. of seed will sow 25 ft. of row; one oz. 100 ft.

109 Extra Early Flat Egyptian

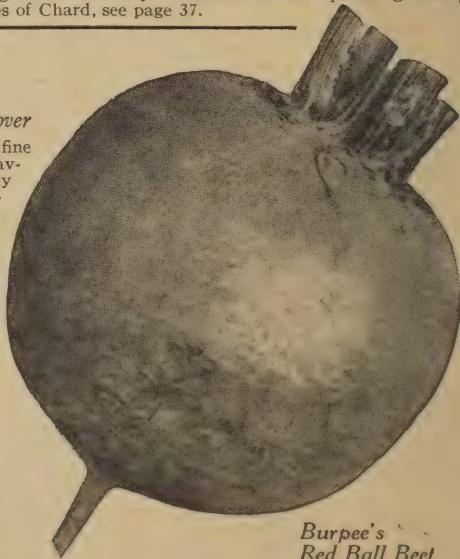

53 days. Roots are distinctly flattened and have a small top; flesh is sweet and tender; dark purplish red zoned with a tinge lighter color. Skin is medium red. The earliest of all beets; fine for home garden and valuable for forcing and early market. Fully grown beets measure 2½ in. in diameter.

Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

107 Burpee's Extra Early ⊙

58 days. Excellent early beet with perfectly smooth globe-shaped roots that are most regular in shape. Will grow to 3 in. in diameter, but, as with all beets, can be used when small. The flesh is dark red and shows hardly any zones. A profitable early, dark red skinned beet with many market growers, especially those having a trade that appreciates quality and attractive appearance in a baby beet. Popular one for the home garden. Flavor is sweet and tasty; ideal for canning or pickling whole. Crop is short. Pkt. 10¢; oz. 25¢.

Beet tops are highly palatable when cooked as "greens" and are richer in Vitamin A than are the roots. Spinach Beet (Swiss Chard) is grown exclusively for the use of its tops as "greens"; for varieties of Chard, see page 37.

Burpee's Red Ball Beet

111 Crosby's Egyptian Beet

56 days. Widely grown for an early crop for the table or market; suitable for freezing. Roots are top to semi-globe shaped and about 3 in. in diameter. The skin is medium dark red and the flesh is a shade or two lighter, with still lighter zones. The tops are medium size, which, together with small, slender tap-roots, make it especially valuable to market growers for bunching. The medium size foliage also permits close planting so that a greater number of beets can be grown on a given area, thus greatly increasing the yield.

Pkt. 10¢; oz. 20¢; ¼ lb. 70¢; ½ lb. \$1.30.

125 Early Wonder — Quick grower

55 days. It is semi-globe shaped, about 3 in. across, with medium-sized tops and a thin tap-root. Dark red skin and deep red flesh with slightly lighter zones. Gardeners like this very early beet; its smooth skin and uniform shape commend it to everyone; its evenness of maturity recommends it as a market variety. Popular beet for canning whole.

Pkt. 10¢; oz. 25¢; ¼ lb. 85¢; ½ lb. \$1.50.

Mangels and Sugar Beets

Used largely for winter feeding of your stock. Sow seed in early spring in rows 2 to 3 ft. apart; cover with ½ in. of soil. A packet will sow 25 ft. of row; an oz., 100 ft.

151 Mammoth Prize Long Red 110 days. Largest and heaviest cropping Mangel. Roots grow to a truly enormous size. Skin is red, flesh white veined pink. Grow ½ to ¾ above the surface so that they are easy to harvest.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

145 Giant Half Sugar Rose 90 days. Broad, wedge-shaped Mangel. Skin is bright rose above and white below; flesh is white. Highly nutritious and rich in sugar. Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

143 Klein Wanzleben 90 days. A heavy yielding Sugar Beet. Large, smooth, white, wedge-shaped roots rich in sugar content. Roots grow entirely below the surface and are smaller than Mangels.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

Brussels Sprouts

BROCCOLI

Same cultural directions as for cabbage will also apply for broccoli. One pkt. produces about 250 plants; oz., 3000; use ¼ lb. for an acre.

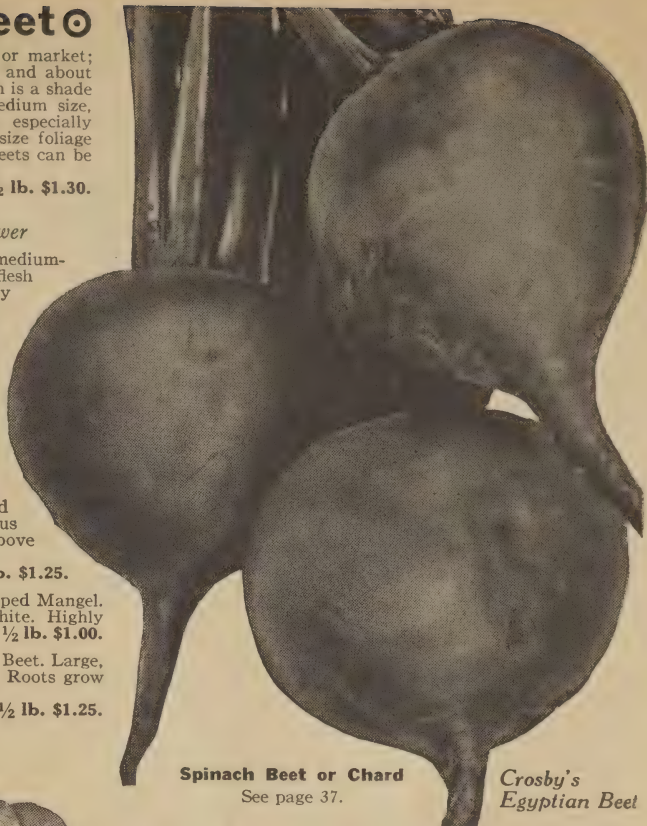

Italian Green Sprouting — Should be in every garden

157 Calabrese 85 days. The standard variety of sprouting broccoli for home garden, market, and recently in large quantities for freezing. Plants are tall, erect and vigorous, reaching 2½ or 3 ft. in height under good conditions, with the central large, green, cauliflower-like head 5 or 6 in. in diameter; after being cut, numerous smaller heads appear over a long period. Delicious flavor when cooked. A sowing made in early spring will furnish heads in summer, while seeds sown in midsummer will provide for a late summer and fall crop.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢.

155 St. Valentine 150 days. Forms large, solid, deep, white heads, identical to cauliflower. Although it is of excellent quality and keeping ability, it is very late maturing and, therefore, not generally adapted to Eastern culture. Largely grown as a winter crop in the Pacific Coast area, especially California. Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

154 Rapa Also known as **Perennial Turnip**. Produces many small green heads which are cut while green with about 6 in. of stalk. One of the first vegetables to mature in the spring if seed is sown in late summer or early fall of the previous year. Tops and flower shoots are superior in flavor to turnip "greens." Pkt. 10¢; oz. 20¢; ¼ lb. 60¢.

BRUSSELS SPROUTS

Best results are usually had by sowing the seed thinly in a specially prepared seed-bed or coldframe before midsummer allowing plenty of time for sprouts to mature before hard frosts; light frosts seem to improve the flavor, which is more delicate than cabbage. In about 30 to 35 days after the seed is sown plants should be big enough to transplant to the garden. Set them 18 in. apart in rows 3 to 4 ft. apart. The "sprouts," dark green, tightly folded, cabbage-like heads, appear along the central stalk at the joints of the leaves and appear first at the bottom of the stalk. Therefore, the lowest sprouts on the plant should be picked each time, after which break off the leaves below the sprout to make further picking easier but do not remove the top leaves. One pkt. will sow 75 ft. of row; an oz., 500 ft.

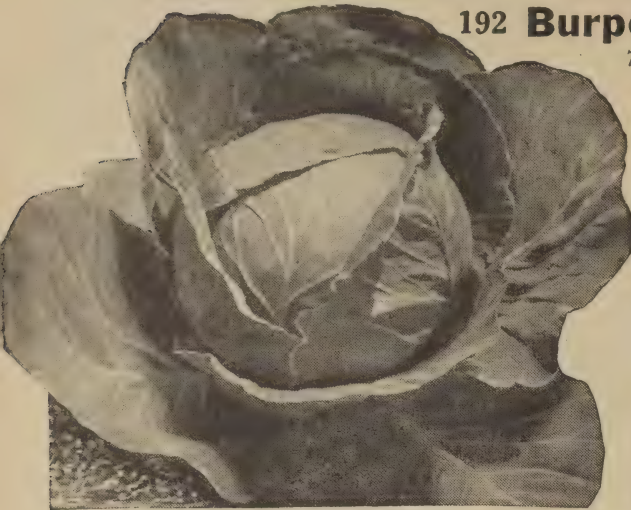

158 Long Island Improved 120 days. Grown extensively on Long Island for the New York market, where it always brings a good price. Compact plants, 20 in. tall, with solid, round, cabbage-like sprouts measuring 1¼ to 1½ in. in diameter. Brussels Sprouts are suitable for freezing. Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

BURPEE'S *Earliest* CABBAGE

192 Burpee's Copenhagen Market ☉

Burpee's Copenhagen Market

72 days. An outstanding strain of the variety which is notable for its uniformity from year to year as well as in a single year's planting. This uniformity makes it valuable to home gardeners and to market growers who supply a critical trade. Extreme earliness is another quality of this cabbage which has found favor with our customers all over the world. Produces well-rounded, solid heads of excellent quality, 6½ in. in diameter and 6 in. deep, weighing from 4 to 4½ lbs. Plants are small and quite compact with few outer leaves, which permits close planting. Heavy yielder.

Pkt. 15¢; ½ oz. 35¢; oz. 65¢.

175 Golden Acre ☉—Round, solid heads

63 days. Has all the wonderful characteristics of our Improved Copenhagen Market, but the heads are a trifle smaller and mature 9 days earlier. They are very uniform, solid, round, 6 in. in diameter, and weigh 3½ to 4 lbs. each—a most satisfactory size for the average family; in quality, they cannot be surpassed. Pkt. 15¢; ½ oz. 35¢; oz. 60¢.

191 Early Jersey Wakefield (Yellows-Resistant)

63 days. The heads are of conical form, with a broad base and pointed top. Compact plants are very productive. About the first of this group of resistant cabbages to mature. Fine for cole slaw, salads and for boiling. Recommended in place of Early Jersey Wakefield only on soils infested with the cabbage yellows.

Seed crop is very short; can offer pkts. only. Pkt. 15¢.

181 Golden Acre (Yellows-Resistant)

64 days. The earliest of the round-headed yellows-resistant cabbages. Heads are medium sized, 5½ in. deep, 6 in. in diameter, and weigh 4 to 5 lbs. each. Plants are short stemmed, erect, with few outer leaves. A remarkably uniform and refined strain of exceptional quality and fair keeping ability. For "yellows" infested land.

Seed crop is very short; can offer pkts. only. Pkt. 15¢.

167 Early Jersey Wakefield ☉

65 days. Uniform heads of conical form, pointed at the top and having a broad base. The entire plant makes a compact growth, with few outer leaves, which permits close planting. Heads weigh 2 to 3 lbs. each, are tightly folded, crisp and tender. Suitable for home garden and markets which prefer early pointed heads.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢.

170 Marion Market (Yellows-Resistant)

73 days. Resembles Copenhagen Market but makes a larger plant. The heads are almost round, very solid, 6½ to 7 in. deep, 8 in. across and weighing 5½ to 7 lbs. each. Favorite early variety for market or home use on yellows-infested land. Quality is good.

Pkt. 15¢; ½ oz. 40¢; oz. 70¢.

They are solid and heavy, weighing from 5½ to 7 lbs. each. Interior is solid, top leaves closely folded; good keeper. Widely adapted; stands hot weather better than other midseason varieties. Grown in the South for northern winter shipment, the heads being harvested when 3 or 4 lbs. in weight. A cabbage that is well named.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢.

190 Wisconsin All Seasons (Yellows-Resistant)

84 days. Bred from All Seasons and has inherited all the good qualities of that excellent cabbage. It is the hardiest of all flat-head varieties and is much in demand for making kraut. Heads are hard and solid. Stands hot weather unusually well. Recommended for "yellows" infested land as it is highly resistant to "yellows" as well as cabbage mosaic.

Pkt. 10¢; ½ oz. 35¢; oz. 60¢.

187 Succession—Nearly round, large

88 days. Heads are large, nearly round, somewhat flattened at the top, but deep. They grow 9 in. across, 5½ to 6 in. deep, and due to their solidity will weigh 7 to 8 lbs. each. A popular short-stemmed, midseason cabbage that can always be depended upon to head up firmly even before fully grown. Keeps well in storage. A quality cabbage of remarkable uniformity; valuable for all purposes. Vigorous plants.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢.

Late or Winter Cabbage

195 Burpee's Surehead

Market Gardeners' Strain; unexcelled, too, for home gardens

93 days. One of the oldest cabbages listed today, Surehead still deserves its name. Our American grown stock is distinct, uniform, and very desirable where a large late cabbage with a flattened head is required. Short stem, small frame, with heads weighing 7 to 10 lbs., 10 to 12 in. in diameter and 6 to 7 in. deep. Good, reliable keeper.

Pkt. 10¢; ½ oz. 35¢; oz. 60¢.

194 Premium Flat Dutch

100 days. The largest cabbage we list—10 to 13 in. across, 5½ to 7 in. deep and weigh 10 lbs. and more. Can of course be used when much smaller. Valuable for late fall and winter use, whether for home or market. Interior is well folded. Medium stem. Pkt. 10¢; ½ oz. 30¢; oz. 50¢.

SAVOY CABBAGE

209 Perfection Drumhead 90 days. Popular on account of its milder, more pleasing flavor than regular cabbage. The large round heads are somewhat flattened, 9 to 10 in. across, 7 to 8 in. deep and weigh 6 to 7 lbs. each. Outer leaves are deep green, crumpled or savoyed; inner leaves lighter green. Heads keep well during the winter. Pkt. 10¢; ½ oz. 30¢; oz. 50¢.

How to Grow Cabbage

For earliest crop, start early and midseason cabbage seed in hot-bed or house; for medium early cabbage, seed may be sown in a coldframe or open-ground seed-bed in early spring. Sow late cabbage for winter use in a seed-bed, outdoors when soil has become thoroughly warm. A pkt. will produce about 250 plants, an oz. about 2000 plants. Days to maturity are figured from the time the plants are set in the garden; allow 30 days to produce plants from seed. Cabbage does best in deep, rich, loamy soil.

CHINESE or CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Where summers are cool, seed may be sown in early spring, otherwise sowings should be made about 3 months before your first expected frost. If sown too early, plants will "bolt" during hot weather and not form heads. A packet will sow about 25 ft. of row, an oz. about 200 ft.

214 Chihli — Earliest; tallest growing

73 days. Deserves to be largely planted, as it is an early and sure-heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. The firm, well-blanching, white heads taper near the top. Leaves are broad, smooth and fringed at the edges. For market and roadside sales, Chihli is extensively grown because the large, attractive heads sell readily; it is the most popular for the home garden. Very crisp and tender; excellent eating whether it is served raw or cooked. Pkt. 15¢; ½ oz. 35¢; oz. 60¢.

212 Pe-Tsai — Medium tall

78 days. Large Cos Lettuce-like heads 12 to 14 in. tall, the inner leaves tightly folded around the thick, pure white heart which is well blanched, tender, juicy, and has an agreeably pungent flavor either eaten raw like lettuce or cooked like cabbage. Desirable for the home garden or market where a smaller head than Chihli is wanted. Quality is excellent. Pkt. 10¢; ½ oz. 30¢; oz. 50¢.

75 days. A long, bunching type which requires a deep soil for best development. When fully mature the roots measure 1½ to 2 in. at the shoulder and 8 to 10 in. long, and taper to a blunt end. The skin is colored rich orange-red and the interior is a deep orange with indistinct core. The quality is excellent and the texture crisp and brittle. 237 Supreme Half Long — All-America Winner

73 days. An improved market type of Danvers Half Long. The roots grow 6 to 7 in. long, 2 in. in diameter at the shoulder, and gently taper to a half stump. The skin and flesh are deep orange, the small core is of the same color as the outer section. The tops are short but suitable for bunching. Unexcelled for table use.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

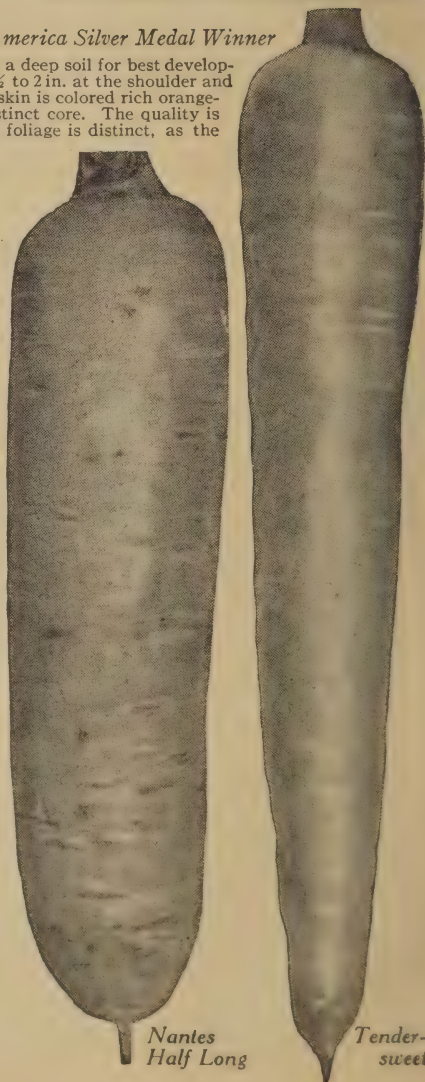

217 Early Golden Ball — Known as French Forcing

69 days. The earliest of all carrots. Excellent for an early crop outdoors or for forcing in frames because of the small size of its tops and the shortness of its roots, which are almost round, from 1½ to 2 in. in diameter, sometimes top-shaped, sometimes broader than long, and rounded at the base. Bright orange skin and flesh. Useful on heavy or shallow soils where long varieties may become rough or misshapen. Exceptionally sweet.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

How to Grow Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make successive sowings every two weeks allowing plenty of time for the last sowing to mature before frost. Cover with ½ in. of fine soil. Thin the small early varieties to stand 7 in. apart in the row and the larger, later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall and the best for winter storing. A pkt. will sow about 30 ft. of row; an oz. about 200 ft.

Nantes Half Long

Tendersweet

223 Burpee's Oxheart Carrot ©

75 days. Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 5 to 5½ in. long and 3 to 3½ in. across where they are thickest; this gives a large amount of edible flesh, which is light orange, tender, sweet, fine grained and of delicious flavor. Because of their shape, they are easy to harvest and do well in shallow or heavy soils where longer carrots often fail to make attractive roots. Fine for home use and busheling rather than bunching.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.50.

234 Imperator—Streamlined favorite for home and market

75 days. An exceptionally heavy yielder; always smooth and uniform. The roots are 8 to 9 in. long, 2 in. across the shoulder, tapering to a rather blunt end. Skin is rich orange-red; flesh is very deep orange. In demand for home gardens, freezing and especially by market gardeners, as it has the shape, size, and color to show to advantage, and the sweet, tender, fine grained flesh of rich flavor to further recommend it.

Pkt. 10¢; ½ oz. 30¢; oz. 55¢; ¼ lb. \$1.65.

218 Amsterdam Forcing—For home and market use

65 days. While especially valuable for forcing, it is desirable for growing outdoors, either for home or market. Roots are bright salmon-red, 6 in. long, 1 in. thick, blunt ended, with small tap-root. Flesh is crisp, sweet and extremely fine-grained. Desirable for freezing.

The skin below the ground is a light orange, but above the soil surface it is green. Will yield heavily, especially in deep, mellow soil. Of high value for feeding cows, horses and sheep during the fall and winter. Easy to harvest as the large sized roots grow partially above the surface as they become fully developed.

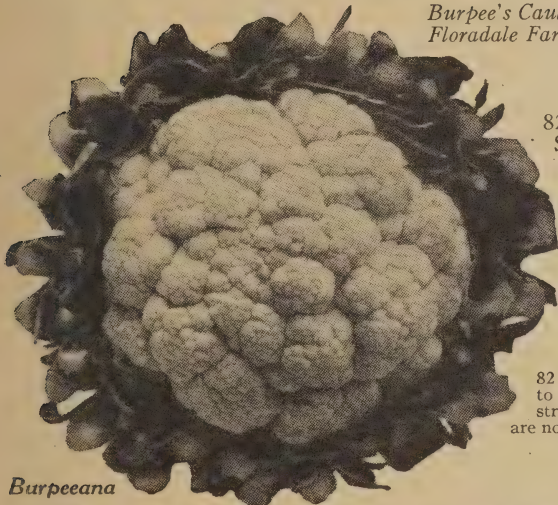

Pkt. 10¢; ½ oz. 20¢; oz. 30¢; ¼ lb. \$1.05.

245 Burpee's Dry Weather ©

95 days. Though cauliflower does best in a cool and moist season, we have in "Dry Weather" a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a cauliflower of the highest quality, producing large, pure white heads that weigh 2 to 3 lbs. each. If you have been unsuccessful in getting cauliflower to head, give Dry Weather a trial.

Pkt. 15¢; ¼ oz. \$1.00; ½ oz. \$1.85; oz. \$3.50.

How to Grow Cauliflower

Cauliflower is best grown as a fall crop in the greater part of the United States, although in regions where summers are reasonably cool, sowings may be made indoors or under glass, 30 to 40 days before it is time to set plants in the garden. For a main or fall crop, sow the seed in a specially prepared seed-bed or cold-frame about 4 months before your first expected frost. When plants are ready to be set in the garden, space them 1½ to 2 ft. apart, in rows 2½ to 3 ft. apart. A packet of seed will produce about 150 plants; 1 oz. 4000 plants. Days to maturity given in descriptions are from the time the plants are set out in the garden.

CAULIFLOWER BROCCOLI

155 St. Valentine 150 days. Large, solid, white heads identical to cauliflower. Too late maturing for general Eastern culture. Recommended as a winter crop, especially in the Pacific Coast area.

Burpee's Seeds Grow 15

Burpee's Black Beauty Eggplant

EGGPLANT

A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in boxes or shallow pans, 8 to 9 weeks before the time to set the plants in the open ground. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. One pkt. of seed will produce about 100 plants; 1 oz. 2000 plants. Days mentioned in description represent the time required from the time the plants are set in the garden until usable or marketable fruits are ready.

420 Burpee's Black Beauty 73 days. The rich purplish black fruits grow to an enormous size, but may be used while still quite small for they are tender and tasty at all stages. When fully developed, they are blunt and broad at the blossom end, weigh several pounds each and are free from spines or thorns. Plants are very productive, 24 to 30 in. tall, spreading horizontally; the very dark skinned fruits are most attractive and of excellent quality. Suitable for freezing. Valuable alike to the market and home gardener.

Pkt. 15¢; ½ oz. 50¢; oz. 95¢.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢.

CRESS

364 Fine Curled (Pepper Grass) 40 days. It grows very quickly and is of the easiest culture. The finely cut leaves may be used for flavoring salads, for garnishing, or as a green in sandwiches. Used with lettuce, it adds an agreeably pungent taste; best if used when young.

Pkt. 15¢; ½ oz. 30¢; oz. 55¢.

365 Upland 60 days. Leaves are dark green, thick, broad and grow in a rosette early in the spring. At this time they are crisp, tender and of the same pungent flavor as Water Cress, the crop of which has been a total failure this year. May be used until seed stalks begin to form.

BURPEE'S CELTUCE

Belongs to the lettuce family but is entirely different in its growth and uses. Fully described on page 29.

ENDIVE—*Green, leafy vegetable suited to summer use*

For early use, sow seed in the open ground as early as it can be worked; for main crop, make two more sowings about a month apart. In early stages of growth, leaves may have a pungent taste but as plants form loose heads, the inner leaves blanch and become sweet and tender. Used principally as a salad; often used for garnishing. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft.

430 Green Curled or Giant Fringed Oyster 65 days. Leaves are finely cut or laciniated, giving the plants a feathery appearance. They are a rich green color but blanch to an appetizing creamy white; crisp and tender. Plants form a rosette measuring 16 to 18 in. across.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

438 Deep Heart or Improved Full Heart 70 days. Improved Batavian with a deeper, fuller and more compact heart. Large, thick, dark green leaves with curled edges. Forms a medium large compact head which readily blanches to light yellow; tender, appetizing and attractive salad. The finest quality mild-flavored Escarolle for home use and preferred by many market gardeners because of the large, edible portion.

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00.

436 Broad-Leaved Batavian 90 days. (Full Heart Strain) Large broad leaves forming immense round plants up to 16 in. across. Can be blanched like curled endive or the leaves may be cooked like spinach or used in soups and stews. A popular Escarolle; the original broad leaf type.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

440 Cos Type Batavian 100 days. The young plants resemble Full Heart Batavian but the leaves are much broader and rounder. Early White Vienna Kohlrabi

Blue Curled
Scotch Kale

KALE—Vitamin-rich green leafy vegetable

Sow seed in the open from early spring until about three months before your first expected hard frost. The early sowings give fully grown plants, whereas the later sowings will furnish delicious, small, tender leaves for late fall and early winter use. Plants will withstand some frost which seems to improve the flavor. Thin or transplant the seedlings to stand 12 in. apart in rows 2 to 3 ft. apart. A pkt. will sow 30 ft. of row; 1 oz. 200 ft. Widely used for "greens."

447 Blue Curled Scotch 55 days. Low growing, compact, short-stemmed plants with finely curled, bluish green leaves of delicious flavor. Hardy growth. Plants grow 12 to 18 in. tall with a spread of 16 to 24 in. In favor for home garden, freezing and market. The curled leaves make an attractive garnish. Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00.

272 Burpee's Fordhook Celery

Famous for Tenderness and Flavor

130 days. Burpee's Fordhook Celery is, without question, the best fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. We offer our improved special strain.

Pkt. 25¢; ½ oz. 75¢; oz. \$1.35; ¼ lb. \$4.00.

268 Golden Plume or Wonderful

115 days. Splendid early celery developed from the famous Golden Self-Blanching; the stalks, however, are larger. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a solid, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily to a beautiful light yellow; the flavor is distinctly nutty and rich. The many good qualities of this widely grown early yellow celery commend it to all growers, whether wanted for home or market use.

Pkt. 15¢; ½ oz. 60¢; oz. \$1.10; ¼ lb. \$3.50.

260 Burpee's Golden Self-Blanching

115 days. This is the American-grown seed produced from the dwarf French-grown stock. It exhibits all the excellent qualities of the original, and is sown extensively by home gardeners as well as by market growers. The plants make a compact, dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor.

Pkt. 20¢; ½ oz. 65¢; oz. \$1.20; ¼ lb. \$4.00.

266 White Plume—Highly recommended for fall and early winter use

112 days. The earliest and the most easily blanched celery; at its best right after digging. Foliage is light green tinted with white. When blanched, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. Grown by market gardeners having a local trade, and a favorite in home gardens for fall and early winter use but not recommended for winter storage as it does not keep well.

Pkt. 10¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$3.00.

267 Easy Blanching—Stalks easily blanched to white

125 days. A second-early celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, free from any fiber or strings, and of extra-fine flavor. Resembles Golden Self-Blanching but stalks blanch white instead of yellow.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$3.00.

276 Utah or Golden Crisp—Famous green celery

130 days. An excellent green celery for fall use or winter storing. Matures about 5 days earlier than Giant Pascal. Plants are compact, stalks broad and thick, exceptionally solid, and when blanched are pure white, crisp, and of the most delicious flavor. Highly satisfactory for all purposes.

Pkt. 15¢; ½ oz. 50¢; oz. 95¢; ¼ lb. \$3.25.

Burpee's
Fordhook
Celery

282 Giant Pascal

Also known as Winter King

135 days. Considered by many the standard winter celery. Plants are large, upright and very heavy. Stalks are tall and thick, solid, stringless, and of a rich, nutty flavor; broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always given entire satisfaction. Enormously productive and of good quality.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$3.00.

275 Winter Queen

120 days. One of the finest dwarf winter celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make stout bunches of extra-heavy stalks with very large, tightly folded, creamy white hearts which are tender, crisp and of excellent flavor. Valuable for the home and market gardener alike; a general favorite.

Pkt. 10¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$3.00.

How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house, allowing 10 to 14 weeks to produce plants large enough to set out when weather gets warm. For the fall or main crop, sow seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than ¼ in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants. Days to maturity are from field setting of plants.

Celeriac

(Turnip-Rooted Celery)

293 Giant Prague 120 days. The edible portion is the large, thick root, which may be used when it has grown about 2 in. across; fully grown roots may average 4 in. in diameter. Celeriac has a flavor similar to celery and is highly valued boiled or used in vegetable soup, stews, and other dishes. It grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Grow as you would celery except that it does not require hilling or blanching. Roots may be stored in moist earth or sand, as you would beets and carrots, and used throughout the winter.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

BURPEE'S Hybrid SWEET CORN

Hybrid Corns are of special value to market growers and canners and many home gardeners because the ears from one planting mature at about the same time; in addition to this uniformity of maturity they are noted for their high yield and resistance to Stewart's disease or bacterial wilt. If you prefer to pull ears from one sowing over a longer period, plant open pollinated or standard varieties listed on the following two pages. Seed saved from hybrids will not come true to type the following year. You must get new seed each year.

How to Grow Sweet Corn

Plant seed after all danger of frost has passed and the soil has become thoroughly warm in rows $2\frac{1}{2}$ to 3 ft. apart, spacing the seeds 4 to 6 in. apart in the row; cover with 1 in. of soil and later thin to stand 9 to 12 in. apart. Some prefer to sow 5 or 6 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups 2 to 3 ft. apart in the row; allow 2 to 4 plants to remain in each group, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make successive sowings every 10 to 14 days, allowing enough time for your last planting to mature before the first expected frost in your locality. Corn should be planted in blocks of at least 4 rows side by side rather than in a single long row, to insure pollination and the development of a full set of kernels. One pkt. will plant 4 rows, each 25 ft. long; 1 lb. 300 groups or so-called "hills."

CUCUMBERS

374 Burpee's Sunnybrook ☉ — Our extra dark green streamliner

60 days. Burpee's Sunnybrook is an outstanding cucumber of the long, slender, dark green, white spine type with stripes absent or inconspicuous for considerably less than $\frac{1}{4}$ its length. Whether used for pickling when small, or for slicing when fully grown, Burpee's Sunnybrook is a valuable cucumber for the home garden, local markets and distant shipping. Fruits are 9 to 11 in. in length and 2 to $2\frac{1}{2}$ in. in diameter when mature, tapering symmetrically toward either end; flesh is firm and thick, with few seeds. The extremely dark color is maintained for a long time after picking. As the seeds form late in the season, the edible period is longer than that of most varieties. We highly recommend Burpee's Sunnybrook for all purposes. Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.25.

How to Grow Cucumbers

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing 4 or 5 weeks later to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure or organic matter dug into the soil where seeds are to be planted and side-dressings of commercial fertilizer after the plants have begun to grow are highly beneficial. Plant in groups 4 to 5 ft. apart, placing 8 to 10 seeds in each group, and cover with $\frac{1}{2}$ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a group. A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row. In descriptions, we refer to "White Spine" and "Black Spine" cucumbers; see page 25 for explanation of these two different types.

Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. All the pickling cucumbers listed below belong to the black spine group, as does Improved Long Green; all others that we offer are white spined.

How to Grow Lettuce

Lettuce grows best during the cool seasons of the year, and in a rich, moist, cool soil, so that the seed should be sown thinly in the spring as soon as the soil can be worked, in rows 1 to 1½ ft. apart, and covered with ½ in. of fine soil. Several successive sowings may follow about two weeks apart, then discontinue sowings until late summer when they may be made to provide lettuce during the fall. Thin heading varieties to stand 1 ft. apart; loose-leaf or cutting varieties, 4 to 6 in. apart. A pkt. will sow 50 ft.; 1 oz. 300 ft.

Cooked celtuce stalks have a pleasing, mild flavor. Young leaves have 4 times the Vitamin C content of head-lettuce leaves.

How to Grow Muskmelons

The most suitable soil is a rich, warm, sandy loam. Sow the seed after the ground has warmed up, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and cover with 1 in. of fine soil. The groups should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a group after the plants are well established. Well-rotted manure dug into the soil where seeds are to be planted and side dressings of commercial fertilizer after the plants have begun to grow are usually beneficial. A pkt. will plant 12 groups, 1 oz. about 50 groups or so-called "hills."

697 White Portugal—Known as Silver Skin

105 days. Large, flat white onion with firm, fine-grained flesh of mild and pleasing flavor. Grown more extensively for sets than any other white onion. Also used for bunching or "green" onions as well as for pickling when small. Pkt. 15¢; ½ oz. 45¢; oz. 85¢.

How to Grow Onions

Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter. A pkt. of seed will sow 20 ft. of row; 1 oz. 200 ft.

ONION and GARLIC SETS

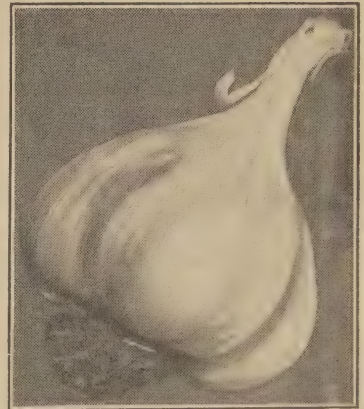

Orders for Onion and Garlic Sets cannot be accepted after May 1

It pays to plant Burpee's sets of the best quality which are produced under ideal conditions from a select strain of seed, carefully screened and stored at the proper temperature until they are sent to you. One lb. of onion sets will plant 50 ft. of row.

Onion and garlic sets should be planted as early in the spring as the soil can be worked. Short cultural directions are given below; full directions are sent with every order. *Because of State law, we regret we are unable to ship onion sets to California.*

How to Grow Peas

Peas make their best growth during cool weather so that the first planting of seed should be made as early in the spring as the soil can be worked. Sow an early variety two or three times at 10-day intervals or choose from the smooth-seeded early, wrinkled-seeded early and main-crop varieties. Sow again in late summer for a fall crop. Planting space available more or less governs the number of sowings and the choice between tall and dwarf varieties. Peas are usually planted in double rows 3 in. apart, the seeds dropped 1 in. apart and covered with 1 to 2 in. of soil. Double rows should be spaced about 2½ ft. apart. Provide supports for the tall-growing varieties. A pkt. will sow 20 ft. of row; 1 lb. 100 ft.

EDIBLE-PODDED or SUGAR PEAS (COOK LIKE SNAP BEANS)

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young, the peas are not shelled but the pods are cooked like snap beans. At this stage, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas. Vines should be given support of string or brush to climb upon for best results.

A pkt. of seed will produce about 100 plants; 1 oz. 1500 plants. The Hot Weather or Everlasting Spinach

70 days. This plant, when prepared for the table, greatly resembles spinach in appearance and flavor. It makes strong plants which resist heat and give an abundance of rich green foliage all during the summer and fall. Sends out fresh growth continuously after being cut so that a supply of "greens" may be had until frost destroys the plants. Both the young stem tips and leaves are fleshy and brittle and of the finest quality when cooked. Plants are not hardy; they attain a spread of 4 ft. when fully grown.

stands hot weather; abundant, continuous yielder**

153 Burpee's Rhubarb Chard ☉

The leaf-stalks are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. You will enjoy its different, tasty, delicious flavor. Plants are so beautiful they may be used in flower borders. Leaves and stalks are nice in flower arrangements; they are good keepers, too.

Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50.

135 Burpee's Fordhook Giant ☉

60 days. The rich green leaves are much crinkled or savoyed, and when grown well they will measure 10 in. in width and 2½ ft. in length. The texture of the leaves is thick and fleshy. The pearly white stems or stalks measure 2½ in. in width.

Pkt. 15¢; oz. 35¢; ¼ lb. \$1.00.

137 Lucullus

60 days. The light green leaves grow to a very large size, are heavily savoyed, crumpled and of a mild spinach-like flavor when cooked. Thick white stalks.

Pkt. 10¢; oz. 25¢; ¼ lb. 70¢.

136 Large Ribbed White

60 days. Large, smooth, green leaves of thick texture grown mostly for the broad, white, tender mid-ribs. The succulent foliage may be used as "greens," being cooked like spinach or beet tops.

Pkt. 10¢; oz. 25¢; ¼ lb. 70¢.

1002 Perpetual or Spinach Beet

50 days. A form of leaf beet somewhat similar to chard. Resistant to heat. The dark green leaves make a good summer substitute for spinach. Quick grower.

Pkt. 10¢; oz. 25¢; ¼ lb. 70¢.

How to Grow Swiss Chard

Sow seed any time from early spring until midsummer in rows 18 to 30 in. apart; cover with ½ in. of soil and thin the seedlings to stand 8 to 10 in. apart in the row. The plants are quite hardy and will yield throughout the summer and fall until frost. The leaves are prepared like spinach, the large mid-ribs like asparagus, or both may be cooked together. All chards are suitable for freezing. Yield heavily wherever beets can be grown. A pkt. will sow 25 ft. of row; 1 oz. 100 ft.

BURPEE'S *Earliest* RADISHES

910 Burpee's Red Giant ☉

29 days. This remarkable radish combines large size with tender crispness and mild flavor. The roots, even though they grow to the enormous size of 1½ in. in diameter, are as crisp as ice if grown quickly. The skin is bright scarlet-red. The flesh is pure white and has a most delicious flavor. It grows to perfection in rich, loose, well-prepared soil. Pick Red Giant when ½ in. in diameter or ten days later when roots measure 1½ in. or more—it's always crisp, sweet and tender.

Pkt. 10¢; oz. 35¢; ¼ lb. 95¢.

890 Comet ☉—Bright scarlet, long standing; All-America Winner

25 days. Bred to meet the increasing demand for an early radish that has the same qualities as Vick's Scarlet Globe, but with a rounded instead of an olive-shaped root. Comet fills the bill; the roots are globe to olive-shaped, bright scarlet, small tap-roots, and for eating and keeping qualities it is surpassed by none. Ideal for home gardens because it will remain crisp and solid for a long time. Tops are large enough for convenient bunching, making it desirable for commercial use.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

886 Crimson Giant Globe—Early, notwithstanding its size

29 days. Differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, 2 in. in depth, 1½ in. in diameter, with thin, tender skin of deep crimson and solid white flesh which is firm, crisp and mild in flavor. It is a very popular variety, of large size, finest quality and remains edible for a long time. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared. Crimson Giant should be thinned to a wider spacing than smaller varieties; we suggest leaving at least 2 in. between plants for full development.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

877 Burpee's Earliest Scarlet Button ☉

25 days. Perfectly round, bright scarlet radish, about 1 in. in diameter with bright scarlet, thin, tender skin and icy white flesh which is crisp and juicy. It has a mild, delicate flavor. Its earliness, the beautiful bright scarlet color, and its unusually brittle and delicious quality make it most desirable for home gardeners and the larger growers as well, either for growing outdoors or under glass.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

893 Sparkler—Attractive; scarlet heavily tipped white

25 days. Choice early variety that is a superior strain of the old Scarlet Turnip White Tip. Small round roots, 1¼ in. in diameter, with bright scarlet top, a clear white base, and small, slender tap-root. The juicy flesh is pure white and of an agreeable snappy flavor. Our stock of this popular variety is perfectly uniform and remarkably fine. A very attractive radish for bunching or market; an excellent variety for the home garden, greenhouses and spring frame forcing. Fine contrast to the all-red varieties.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

895 Cavalier—Oblong globe shaped

25 days. Our strain of this important variety has been rigidly reselected and represents an elite stock suitable for use by the most critical trade. Roots are highly colored, oblong globe shape, bright scarlet, firm, crisp flesh, and the short tops make it especially suitable for growing on muck land as well as upland soil. For home and market.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

907 French Breakfast—Oblong shaped

23 days. Oblong or deep olive-shape, 1¾ in. long and ¾ in. wide. Bright rose-scarlet skin, shading to clear white in the lower portion. The flesh is white, firm, and crisp; juicy, mildly pungent and tender. A quick grower and exceedingly popular for home or market as well as for forcing. Tops are very short, with radishes showing partly above the ground.

Pkt. 10¢; oz. 30¢; ¼ lb. 90¢.

878 Burpee's Rapid Red Radish ☉

23 days. A radish everyone should plant; it is early, of fine quality, refined, smooth, attractive appearance and pungent flavor. Small, bright red and as round as marbles, $\frac{3}{4}$ in. in diameter, with thin, bright red skin. The flesh is pure white, crisp, and delightfully snappy. Tops are short, making it desirable for growing under glass. The quicker they are grown, indoors or out, the crisper their flesh and the more delectable their flavor.

How to Grow Radishes

Sow the seed of the earliest and midseason radishes as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering $\frac{1}{2}$ in. deep. Thin small varieties to stand 1 to $1\frac{1}{2}$ in. apart in the row; larger varieties, 3 to 4 in. apart. Make successive plantings every 10 days until early summer, then, resume one month before frost. Seed of winter radishes is sown in the summer for fall and winter use. A moderately light soil produces the smoothest and best roots. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft.

Order Your Seeds Early

*Vick's
Scarlet
Globe*

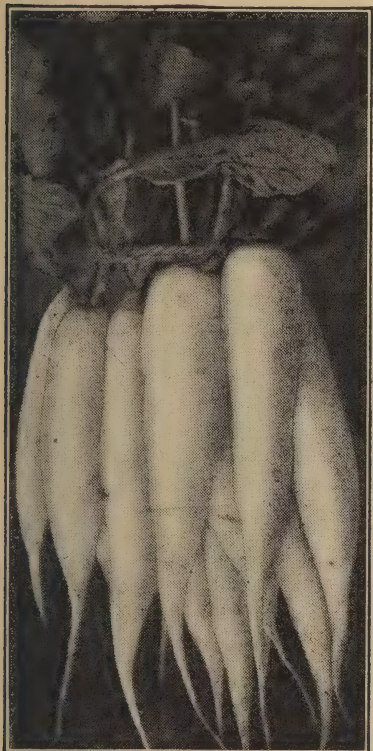

Because radish seeds germinate so quickly, they are often sown in the same row as seeds of beet, carrot, parsley and parsnip. They not only mark the row where the slower growing vegetables were sown, but often are usable before the companion crops have made any sizable growth.

883 Vick's Scarlet Globe ☉

24 days. This grand radish has established a good reputation as a forcing sort. Grows round to olive-shaped, bright scarlet radishes, 1 in. in diameter. It is crisp and tasty, with fine white flesh and a medium-sized top; right for bunching. Does equally as well outdoors for either the market or home garden; popular everywhere. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

938 White Icicle ☉ — Most popular of all long radishes

28 days. Skin is pure white, thin and tender; flesh is icy white, crisp, juicy, perfectly mild and of a delightfully sweet flavor with just enough pungency to appeal to the appetite. Remains solid, being fully as good when 1 in. across as when only $\frac{1}{2}$ in. The roots grow 5 in. in length and are the shape of an icicle, straight and free from side roots. Splendid for either spring or fall use whether for home or market. Thorough and deep soil preparation is advisable to secure well-formed, uniform roots. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

White Icicle Radish

Winter Radishes

These require cool weather at the finish of their growing season. Sow seed in early summer for fall use; in midsummer for late fall and winter. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter. We offer 3 best kinds. Give plants plenty of room by thinning out when young to stand 3 in. or more apart.

963 White Chinese or Celestial 60 days. Smooth, pure white roots, 6 to 8 in. long, with a diameter of 3 in. Flesh is crisp, juicy, icy white and of mild flavor—the least pungent of all winter radishes.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

967 Chinese Rose or Scarlet China 55 days. Oval-shaped, 5 to 6 in. long and 2 in. in diameter. Skin deep rose, white tip. Flesh pure white and mildly pungent. Excellent for bunching or storage.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

971 Long Black Spanish 60 days. Black-skinned with pure white flesh, crisp, solid and pungent; 7 to 10 in. long and 2 to 3 in. thick, nearly the same size at the bottom as the top. Fine winter keeper.

Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

*White
Strassburg*

Midseason or Summer Radishes

The following varieties require more time to mature than the spring radishes so that they are becoming ready to use when the others are gone. As they grow more slowly, they endure heat better and are valuable for summer use. Flesh is mildly pungent. We suggest a deep and thorough preparation of the soil to obtain the best roots.

928 Early Long Scarlet Short Top 30 days. Without exception the very best long, brittle, red radish. Almost 6 in. in length, and matures in about 4 weeks. Our strain of this beautiful long radish is simply perfection. Skin is an attractive bright scarlet red; the tender flesh is icy white and of the finest flavor, somewhat more pungent than Icicle. Grow partly above ground which makes pulling easy. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢.

959 White Strassburg 40 days. Mildly pungent; $4\frac{1}{2}$ to 5 in. long and 2 in. in diameter. Skin and flesh are white. Crisp, tender and of an icy texture. Widely grown for home garden use and by market gardeners in some sections for local sales. Remains in good condition for a long time.

How to Grow Summer Squash

Sow seed after all danger of frost has passed, putting 8 to 10 seeds in groups, allowing 2 to 3 in. between the seeds and spacing the groups of bush varieties 4 ft. apart each way and those of the running kinds either 8 by 8 ft. or 10 by 12 ft. apart. Thin bush varieties so that 4 of the strongest plants remain in a group; running varieties allow 3 plants to a group. Squashes grow best in a fertile, deep soil. A pkt. will plant about 10 groups; an oz. 50 groups or so-called hills.

Burpee's TAMPALA

Burpee's Tampala—Better than Spinach

1375 Burpee's Tampala (*Tām-pāl'-a*) is so different in flavor to other vegetables used as "greens" that it is difficult to compare it to any of them. The leaves are cooked, prepared and served like spinach but is better than spinach in many respects.

Tampala retains its tenderness for a longer time, has a consistency and flavor all its own, less irony and less puckery than spinach, more flavor, more body, and more food value than spinach or chard.

Tampala is easy to grow and does well in hot weather and keeps on producing all summer. One sowing usually produces enough "greens" for the season. However, for a continuous supply of the most tender leaves make several successive sowings 10 days or 2 weeks apart and use the entire plants when 5 or 6 in. high; this should be in from 6 to 8 weeks after sowing the seed. Either broadcast the seed or sow in rows 12 to 15 in. apart.

Sow seed outdoors any time after the ground becomes warm. If you wish to grow plants singly, space rows 2 ft. apart and thin out or transplant 2 ft. apart in the row; use the 4 or 5 inch tips of each branch and repeated cuttings may be made as new leaves and stems grow.

Pkt. 15¢; 2 pkts. 25¢; ½ oz. 60¢; ¼ oz. \$1.00; oz. \$3.50.

1111 Jubilee is our new orange-yellow tomato that has been so enthusiastically praised by growers everywhere. Jubilee compares favorably with the best of the standard red varieties in shape, smoothness, quality and solidity. Entirely different from any yellow or orange tomato you ever grew. Most attractive when sliced and does not leak when cut. Makes delicious juice. Very high in Vitamins A and C. Three times as much Vitamin A as oranges. Ready in 72 days.

How to Grow Tomatoes

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow the seed in a hotbed, or in a shallow box in the house, allowing 6 to 8 weeks to produce plants large enough for setting outdoors when weather becomes warm. Sow in rows 3 in. apart and cover with ¼ in. of soil. When plants are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past, in rows 4 ft. apart and 3 or 4 ft. apart in the row. A pkt. will produce about 200 plants; 1 oz. 2000 plants; 2 ozs. will furnish enough plants for one acre. Days to maturity are from field setting of the plants until first usable fruits are ready.

Pink Fruited Tomatoes

*Burpee's
Globe*

1092 Burpee's Globe ⊙

80 days. Decidedly distinct tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large sized, rich, pinkish red tomatoes. The globe-shaped fruits grow in clusters of 6 to 10; solid, meaty, and free from any core. Contains little or no acid and is a shy seeder, the seed cavities being full of solid meat. Excellent for home and market garden where a main-crop pink tomato of solidity and quality with high yielding ability is desired. Adapted to pruning and staking.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

1085 Sweetmeat ⊙ —Wilt-resistant

66 days. Semi-globular in shape, weighing 5 ozs. and more; ripen evenly throughout and are quite free from cracking. Heavy vines give ample protection to the fruit. Flesh is solid, fine grained and of the most delicious flavor. Sweetmeat fills a definite place as a wilt-resistant, uniformly colored pink of second-early season.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

1114 True Giant Ponderosa ⊙

81 days. Grow extremely large and are full of luscious, juicy flesh. The seed cavities are remarkably small, which accounts for the solid meat. It is not unusual for the tomatoes to weigh 24 ozs. and more, though the average runs around 9 ozs. They are deep, somewhat flattened, and have a most agreeably mild flavor. People who do not care for the acid flavor of the deep red tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor. Essentially a home garden tomato.

Pkt. 15¢; ½ oz. 60¢; oz. \$1.10.

1091 Oxheart —Extra large, deep fruits

86 days. One of the largest tomatoes ever introduced, some fruits weighing 2 lbs. each. The oxheart shape of the pinkish red fruits is most distinct; interior is extremely solid with thick, firm walls and small seed cavities with few seeds. Primarily a home garden variety but readily salable on local markets and roadside stands.

Seed crop is very short. Pkt. 15¢; ½ oz. 65¢.

1107 June Pink —Also known as Pink Earliana

60 days. Fruits are somewhat flattened, weigh 4 to 5 ozs. and have bright deep pink skin and rich pinkish red flesh. The meat is solid and has a delightful sub-acid flavor. It is the earliest pink-skinned tomato.

Pkt. 10¢; ½ oz. 50¢; oz. 90¢.

1095 Burpee's Dwarf Giant —Tree type

80 days. Plants are of the dwarf or tree type; fruits are flattened, with rich purple-crimson skin. The meat is fine-grained, juicy, and solid. Desirable home garden variety for those who want to grow large tomatoes in a small space.

Pkt. 15¢; ½ oz. 55¢; oz. \$1.00.

Burpee's Red Tomatoes

1118 Burpee's Table Talk ☉

75 days. The fruit, unusual in that it combines large size with deep globular form, averages 7 to 8½ ozs. The shoulder is smooth, there is little or no depression at the stem end, and the scar is quite small—in other words, it is refined in spite of its size. The color is bright scarlet, uniform and attractive. Slice Burpee's Table Talk Tomato and you will marvel at the structure and the firmness of its interior. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, thus forming a dense mass of foliage which protects the fruit from sun-scald. *Seed crop is very short; can offer pkts. only.* Pkt. 15¢.

1097 Burpee's Sunnybrook Earliana

58 days. This is our own strain of Earliana. Earliness, smoothness of fruit and compactness of vine growth have all been stressed in an effort to produce a tomato that is really superior. Fruits are of medium size, scarlet red, solid, fleshy, and with a tart but agreeable flavor. Splendid extra early tomato for home and market. Pkt. 10¢; ½ oz. 50¢; oz. 90¢.

1089 Marglobe—A most important tomato

73 days. Grown from the same stock seed of our highly selected strain and under the same conditions, but crop was not inspected for certification. Pkt. 10¢; ½ oz. 35¢; oz. 65¢.

1089C Marglobe, Certified ☉

Burpee's Special Fordhook Strain

73 days. This remarkable strain of Marglobe is the result of many years of selection on our Fordhook Farms. In making our selections, we have stressed heavy vine growth, uniformity of vine and fruit, yield, large fruit size, shipping quality and disease resistance. Vines are large and vigorous, giving full protection to the crop. Fruits are globe shaped, rich red inside and out, with thick internal and outer walls and small cells; the flavor is slightly sweet. Marglobe is probably the most important tomato throughout the country for home and market. Pkt. 15¢; ½ oz. 40¢; oz. 75¢.

1077 Burpee's Gloriana

55 days. A tomato of the Earliana type, but preceding that variety in maturity by 3 to 5 days and excelling it in quality, fruit shape and appearance, yield, and length of bearing season. The plant is small at the beginning of the season, becoming medium size when fully grown. The fruit clusters are very large. Fruit is medium scarlet-red, semi-globular, neat at the shoulder, with extremely small stem cavity and blossom scar; weigh 5 ozs. *Seed crop is very short.* Pkt. 15¢; ½ oz. 50¢.

1113 Grothen's Globe ☉

68 days. A heavy vined selection from Break O'Day which has given remarkable results as a market tomato in many sections. Fruits are globe shaped, with well-rounded shoulders; average 7 to 8 ozs. in weight; walls are thick and firm; skin is brilliant red, free from yellow color at the stem end. Interior is solid.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

1120C Bonny Best, Certified

66 days. One of the most popular second-early tomatoes for both home and market growing and a foremost greenhouse forcing variety. Scarlet-red fruits, flattened globe in shape, are borne on medium sized, vigorous vines. One of the earliest varieties producing marketable sized tomatoes. Adapted to northern states.

Pkt. 15¢; ½ oz. 40¢; oz. 70¢.

1120 Bonny Best—Early, large, smooth

66 days. Produced from crops that were not inspected for certification. Grown and harvested under the most favorable of conditions from select stock seed.

Pkt. 10¢; ½ oz. 35¢; oz. 60¢.

1087 John Baer—Popular in many sections

66 days. The rich, scarlet-red fruits are thick through and slightly flattened at the top; smooth, firm, and medium large. A favorably known home gardeners' tomato in some sections for main crop.

Pkt. 10¢; ½ oz. 40¢; oz. 70¢.

"I've been raising tomatoes for 65 years. Your seeds have always proved good; your Table Talk and Marglobe tomatoes are wonders. Words cannot describe their looks, quality or exquisite taste. I can recommend Burpee's Seeds to anyone. There are none better." W. H. Baker, Tucson, Arizona.

EXPLANATION OF CERTIFIED TOMATO SEED

Seed listed as "Certified" is produced from crops that were inspected and certified as to trueness to type and freedom from disease by the Agricultural Department of the state in which they were grown.

1072C Rutgers Certified ☉

74 days. A commercial variety of great importance in most of the Eastern and Southern states. It is suitable for canning, juicing, and for long distance shipping. Large fruit size, $6\frac{1}{2}$ to $7\frac{1}{2}$ ozs., makes it favored over many other popular tomatoes. Globular in shape, slightly flattened, smooth, bright red, and with heavy walls and small cells. Vine is vigorous, heavy, and wilt-resistant to a high degree. For home or market. Pkt. 15¢; $\frac{1}{2}$ oz. 40¢; oz. 75¢.

1072 Rutgers—Does well on light soils

74 days. Description of Rutgers Certified is the same as for Rutgers which was grown from stock seed released by the New Jersey Agricultural Experiment Station but the crop was not inspected for certification. Pkt. 10¢; $\frac{1}{2}$ oz. 35¢; oz. 65¢.

1101 Chalk's Early Jewel—Sweet flavor

68 days. Fruits are nearly round and slightly flattened; very deep, solid, and meaty, with only a few quite small seed-cells. The color of the skin is an attractive rich crimson-scarlet and the fine-grained flesh is a deep scarlet-red. Pkt. 10¢; $\frac{1}{2}$ oz. 40¢; oz. 70¢.

1079 Bounty—Valuable for small gardens

61 days. A first-early, heavy cropping tomato with fruit the size and shape worthy of a midseason variety. Developed especially for the Northern States, Canada, as well as dry and mountain areas. Tomatoes are scarlet, very uniformly colored, average 6 ozs. in weight, semi-globular, smooth and remarkably free from stem-end cracks. Plants are small, short, and may be set as close as 2 ft. apart in the row, thus taking up little space; they are not suited to pruning and staking. Pkt. 15¢; $\frac{1}{2}$ oz. 50¢; oz. 90¢.

1119 Pan America—Resistant to fusarium wilt

75 days. Developed by the United States Department of Agriculture and worthy of a trial in anybody's garden. The vines possess very high resistance to fusarium wilt, and the foliage is sufficiently dense to shade the fruit during development. Ripe fruits are globular to deep oblate in shape, bright scarlet, with a scarlet red interior, and weigh about 7 ozs. Suitable for all purposes.

Seed crop is very short. Pkt. 15¢; $\frac{1}{2}$ oz. 75¢.

1125 Break O'Day—Wilt and rust resistant

63 days. Outstanding for its maturity, smooth, uniform, globe-shaped fruits and resistance to wilt. Plants are large, producing an abundance of medium sized, bright red fruit with thick walls, small seed cavities, and splendid flavor. Best adapted to rich, heavy soils. It is recommended for home and market. Pkt. 10¢; $\frac{1}{2}$ oz. 45¢; oz. 80¢.

1115 Beefsteak—Also known as Crimson Cushion

80 days. The largest red-fruited tomato. Resembles Ponderosa in many ways except color—Ponderosa has purplish pink skin while Beefsteak is scarlet-red. The vigorous vines produce an abundance of extra large size fruits which are more or less ribbed. The flesh is a beautiful deep scarlet; juicy, solid, and has a rich sub-acid flavor. Grown extensively by home gardeners. Pkt. 15¢; $\frac{1}{2}$ oz. 60¢; oz. \$1.10.

1093 Dwarf Stone—Tree-type plant

83 days. Very choice tomato of dwarf habit, making a distinct, tree-like growth which requires no training. Large, smooth fruits of a bright scarlet-red color; average 4 in. in diameter and are about $3\frac{1}{2}$ in. deep. Contain few seeds. Pkt. 10¢; $\frac{1}{2}$ oz. 50¢; oz. 90¢.

1106C Pritchard or Scarlet Topper, Certified ☉

70 days. The ideal all-purpose tomato for growing in soil of high fertility. The "self-topping" habit prevents excessive vine growth under all conditions. Produces an abundant crop of bright red, globe-shaped fruits of medium size and excellent quality. Very smooth and uniform. Another of the popular wilt-resistant tomatoes developed by Dr. Pritchard of the United States Department of Agriculture, Washington, D. C. Pkt. 15¢; $\frac{1}{2}$ oz. 40¢; oz. 75¢.

1106 Pritchard or Scarlet Topper

70 days. Identical with the above variety except the crops were not field inspected and certified by the Agricultural Department. Pkt. 10¢; $\frac{1}{2}$ oz. 35¢; oz. 65¢.

Sizes and weights of tomatoes

given in our descriptions are for the general field-run of fruits. Customers often write us that they have produced tomatoes bigger than we state they will grow. This is not surprising for with special care, proper fertilizing, watering, pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables, as well as tomatoes.

BURPEE'S BEAUTIFUL ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late blooming varieties. If you plant some very early varieties, we suggest that you have seedlings of other flowers coming along to take the place of the earlies when they are through blooming, thus keeping all your ground occupied during the entire season.

* Varieties marked with an asterisk (*) are the Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."

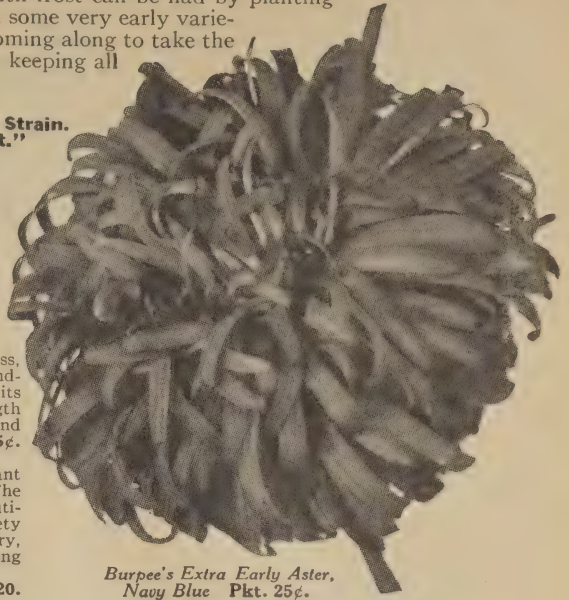

Burpee's Extra Early Asters

In full bloom before others begin to flower

To those who love the delicacy and richness of asters, these extremely early flowering varieties will be a joy. Plants are of open, spreading habit, 1½ ft. tall and about 2 ft. across. **Pkt. 15¢; ⅓ oz. 50¢; ¼ oz. 85¢.**

Burpee's Annual Larkspurs

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom. We offer your choice of three distinct types.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better—but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin them to stand 1 to 1½ ft. apart.

When in full bloom, the entire top and sides of the plants are covered with deep golden orange flowers, which grow 3 in. across and somewhat resemble carnations but differ in that the petals are ruffled and slightly fluted. Comes into bloom rather late; we suggest starting seed indoors for earliest blooms. Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.

Burpee's Best Marigolds

2168 Tall African, Mixed Colors

Remarkable for its wide color range and high percentage of fully double flowers. Colors run from the deepest orange to lightest primrose. Flowers are of many shapes—ball, carnation, chrysanthemum and peony flowered forms. They are large, many 5 in. across, with the average somewhat over 4 in. The plants grow from 2½ to 3 ft. tall; some begin to bloom early, some midseason and others late. Unsurpassed where a gay mixture of yellow and orange flowers is desired. Pkt. 25¢; ⅛ oz. 70¢; ¼ oz. \$1.25.

BURPEE'S HYBRID MARIGOLDS

2271 Burpee's Red and Gold Hybrids

Hybrids between African and French Marigolds; some flowers are solid red while others are delightful combinations of red and gold. The color varies with the season—at times it becomes almost pure golden yellow and at other times a bright, rich mahogany-scarlet. Flowers are exceedingly double, 2½ to 3 in. across, nearly three times the size of the largest double French Marigold.

Burpee's Red and Gold Hybrid Marigolds are extremely early; they will come into flower in eight weeks from seed and continue to bear profusely and continuously until frost. The bushy, upright plants grow 1½ ft. tall, 2 ft. wide and are covered with flowers at all times. Especially suited for borders and beds; highly prized for cutflowers. Pkt. (75 seeds) 15¢; 150 seeds 25¢; 300 seeds 50¢; 600 seeds \$1.00.

2238 Burpee's Wildfire

Single fertile hybrids between the African and French Marigolds. Large single flowers, 2 to 3 in. across, in a full range of colors found in the French type, including many of the most amazing and bizarre patterns and markings. Colors include bright scarlet, deep orange, golden orange, golden, mahogany and yellow. On some plants the color varies from flower to flower. Flower shapes vary too. There are all types of petal forms, from long narrow petals to short broad ones; some flat, others curled and wavy. Plants vary in height from 14 to 20 in. Wildfire is ideal as a cut flower; in fact, we believe it is one of the best single flowers for cutting we have ever seen. Plants come into bloom within 8 weeks from seed and continue to flower profusely until frost. Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.

2237 Idabelle Firestone Marigold

Being hybrids, some yellow or yellow and red variegated flowers may appear in any planting. Lovely as cut flowers; suited for large beds and wide borders. Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.

Makes a gorgeous display in the garden; excellent for cutting. Extra long stems and odorless foliage. Blooms from midsummer until frost. Grows 2 1/2 ft. tall.

Pkt. 25¢; 1/8 oz. 75¢; 1/4 oz. \$1.25.

2374 Honeycomb—Unique flower form

A Dwarf Double African Marigold of an entirely new shape. Flowers are somewhat like the chrysanthemum-flowered types, but instead of the florets being curled and interlaced, they are erect-like and so arranged as to resemble a honeycomb in appearance, hence the name. Added to this unique flower form is a color that is rich, deep, sparkling and attractive—a most intense marigold orange. Honeycomb is very early flowering, grows about 14 in. high. Most effective in beds and borders, and although the plants are dwarf, cutting stems of good length may be obtained. Foliage is without the usual marigold odor.

Pkt. 25¢; 1/8 oz. 75¢; 1/4 oz. \$1.25.

2294 Burpee Gold Improved

Larger flowered and stronger growing than the original Burpee Gold. The carnation-like flowers grow 3 1/2 to 4 in. across and are of a glorious bright orange color with the long petals loosely arranged. Plants grow 2 1/2 ft. tall; foliage is odorless.

2163 Special Mixture Burpee's Carnation Marigolds with Odorless Foliage

All Marigolds with Odorless Foliage, all Hybrid Marigolds and many other fine marigolds were created by Burpee; many of these originations are All-America prize winners.

2365 Mayling—Newest frilled marigold

By permission, named Mayling in honor of Madame Chiang Kai-Shek. Flowers grow 3 in. and more across, the petals being incurved practically their entire length and daintily fringed on the outer edges. This gives a soft, airy, fluffy appearance to the rich, buttery, golden primrose flowers. Plants grow about 2 ft. tall, are very profuse blooming, beginning early in the summer and continue until frost. The foliage is without odor.

Pkt. 25¢; 1/8 oz. 85¢; 1/4 oz. \$1.50.

2199 Crown of Gold

All-America Gold Medal Winner

The first of the famous Burpee marigolds with odorless foliage; sweetly fragrant collarette flowers of brilliant orange-gold, 2 in. across, are borne early and profusely for a long time. 2 ft. tall.

2272 Golden Glow—Rudbeckia-like flowers

Flowers are bright, sharp, golden-yellow and resemble in color and appearance those of the familiar Golden Glow Rudbeckia. In general form, flowers are somewhat like the chrysanthemum-flowered types but petals are straight, sharply pointed and lie rather flat instead of curling and interlacing. Flowers, 2 1/2 in. across, are borne in clusters on the ends of heavy branches. Plants are 2 ft. tall; odorless foliage.

Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.

2364 Oriole—Carnation-like golden yellow flowers

The flowers are large, 3 1/2 in. across, of a new and sparkling shade of bright golden yellow; carnation-like form, with the petals loose and tilted. Plants grow 2 1/2 ft. tall and freely produce their flowers on long, wiry stems above the odorless foliage which makes them most desirable for cutting, as well as being showy in beds and borders.

Pkt. 15¢; 1/8 oz. 50¢; 1/4 oz. 85¢.

2378 Cupid—No other marigold like it

Extra dwarf African Marigold, dwarfer than most French varieties and with larger flowers. BURPEE'S SHOWY PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam, such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in the shade nor in soil that is overly rich. We offer an extra select assortment of varieties, some of which are suited for bedding and pot culture, others are ideal for edgings and mass plantings while others are unexcelled for porch and window boxes; all are excellent for cutting.

Bedding Petunias (*Petunia hybrida*)

Plants are extremely free blooming, producing a wealth of flowers even under the most trying conditions of weather and soil. Ideal for large beds, borders and porch boxes. Seeds may be sown directly outdoors when soil has become warm or, for earliest blooms, start the seeds indoors in pots or shallow boxes of fine soil. Grow 1½ to 2 ft. tall.

2563 Burpee's Blue Rich, clear ultramarine-blue flowers, 2½ to 3 in. across. The finest blue bedding spreading petunia.
Pkt. 15¢; ¼ oz. 50¢; ½ oz. 85¢.

2441 Eleanor Plant habit is distinctly different, being thickly branched so that the stems figuratively stand up in a bush-like, erect manner. Flowers are large, up to 3 in. in diameter, light rosy mauve veined carmine-crimson in the throat.
Pkt. 25¢; ¼ oz. 60¢; ½ oz. \$1.00.

2467 Flaming Velvet All-America Gold Medal Winner. Extra-fine textured large blooms of a most beautiful shade of deep velvety mahogany-red with a luster of scarlet. Rich and luminous coloring.

*Double
Nasturtium
Garnet Gem*
Pkt. 15¢.

Burpee's Nasturtiums

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil. A soil that is overly rich will cause plants to produce more leaves than flowers. They are then most useful plants for dry, sandy, or gravelly locations. Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and tall or dwarf growing. Their varied and brilliant colors, different shapes and refreshing fragrance make them most desirable for cutting.

Dwarf Double Nasturtiums

Plants are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double sweet-scented flowers are produced most freely on very long stems which makes them especially fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants covered with flowers are most attractive in beds, borders, edgings, rock gardens and pots.

2338 Cherry Rose An exquisite shade of soft cherry-rose. Flowers grow 2½ to 3 in. across and are produced earlier and more profusely than any other nasturtium. Nice for cutting; showy in the garden. Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50.

2306 Delightful Soft salmon-cerise, the upper petals prettily marked crimson-maroon at the base, and, as flowers age, they often take on a deeper shade of salmon-cerise. Pkt. 15¢; oz. 45¢; ¼ lb. \$1.25.

2336 Garnet Gem Deep, rich, very bright garnet-red with just enough orange to enliven it with an iridescent glow. The delightfully sweet-scented flowers are double or semi-double, 2½ in. across, with 8 to 10 petals. Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50.

2329 Golden Globe Exquisite, giant double and semi-double, pure golden yellow fragrant blooms of the same color and shape as Golden Gleam, but the plants are dwarf, globe-shaped and bushy. Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00.

2346 Mahogany Gem The darkest colored nasturtium we have ever seen; the velvety, brilliant flowers are rich, deep mahogany and very large. Pkt. 15¢; oz. 45¢; ¼ lb. \$1.25.

2305 Orange Glory The large, sweet-scented flowers are bright orange; the base of each of the upper petals and most of the inside of the throat are painted with deep garnet-brown. Petals are wonderfully fluted and crinkled. Pkt. 15¢; oz. 45¢; ¼ lb. \$1.25.

2348 Primrose Gem The dwarf, compact plants are literally covered with giant double, sweet-scented, soft primrose colored flowers on long stems. Pkt. 15¢; oz. 50¢; ¼ lb. \$1.50.

2327 Scarlet Globe Perfect compact plants of uniform, globe-shaped growth bearing giant double and semi-double, sweet-scented, fiery scarlet blooms. 3 in. across, in great profusion. Pkt. 15¢; oz. 45¢; ¼ lb. \$1.25.

Snapdragons (botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable.

Tall Giant Snapdragons

Plants will grow 4 ft. and more tall under glass during the winter, depending on climate, planting dates and growing conditions.

Rust-Resistant Varieties

Plants are base branching, each plant producing 8 to 18 long, graceful spikes covered with large flowers. Foliage is clean, healthy and luxuriant. For their size, form, and resistance to rust-disease, we recommend them most highly.

EARLY FLOWERING SWEET PEAS

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—3 to 4 weeks earlier than the Giant Spencer varieties. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep, rich soil which must be well drained.

We have marked with a star (*) the varieties that we prefer in each color class; if you are in doubt as to which to choose, make your selection from those thus marked. All, however, are lovely and desirable. In each color class, we have arranged varieties from deep to light shades.

Burpee's Famous Zinnias

Burpee's Super Giants, largest of all Zinnias. Illustrated in color on inside back cover. Pkt. 25¢.

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They last for days when cut; we offer a selection of different size flowers and colors for every purpose. All the different types are easy to grow if the following simple suggestions are followed.

Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing to bloom until fall.

3175 Finest Mixed Contains the loveliest colors and combinations of colors ever seen in this flower. Rare and unusual shades of cream, buff, apricot, salmon, rose and orange predominate, with a few yellows and whites; scarlet and crimson are not prominent, though there are some very attractive flowers in these colors. One is impressed at the many two-tone and three-tone color effects seen in some of the blooms of Super Giants.

Flowers are truly giant, $5\frac{1}{2}$ to $6\frac{1}{2}$ in. across, and of a wide diversity of flower form—some like Dahlia Flowered, others like Giants of California, and still others with curled and twisted chrysanthemum-like flower heads. Striking in the garden; invaluable for cutting. Wonderful for exhibition. Grow 3 ft. tall. Pkt. 25¢; $\frac{1}{8}$ oz. 50¢; $\frac{1}{4}$ oz. 85¢; $\frac{1}{2}$ oz. \$1.50.

Giants of California Zinnias

Immense double flowers, 5 to 6 in. across, of a distinctive shape that is most graceful and desirable. The overlapping petals are more loosely placed than in the Dahlia Flowered type of zinnia, and the flowers themselves are more flattened, being only about 1 in. in depth. The vigorous, well-branched plants grow about 3 ft. tall and produce many long, strong flower stems. Ideal for cutting; attractive in beds and borders. When cut, the flowers will last in good condition for days.

3185 Daffodil Distinct shade of bright canary or daffodil-yellow that is so popular for cutting.

3190 Enchantress Light rose with dark rose center. A truly enchanting two-toned color combination.

3192 Golden Queen or Lemon Queen Lemon-yellow with a distinct golden yellow suffusion.

3197 Lavender Gem Deep lavender, turning to a warm purple as the flower matures. A rare shade.

3191 Miss Willmott Lovely, delicate, yet warm, soft pink, deepening somewhat in color as the flowers age.

3187 Orange King Rich cadmium or orange-scarlet flowers of remarkable brilliance; many are two-toned.

3186 Purity Most outstanding for its pure white color.

3188 Rose Queen Pure, clear rose. Highly desirable shade.

3198 Salmon Queen Salmon-rose flowers of unusual beauty; particularly attractive in the garden and highly prized for home decoration because of its most delightful color.

3189 Scarlet King Glowing scarlet of exceptional brilliance.

3199 Violet Queen Marvelous flowers of a wonderful shade of deep purple; especially beautiful under artificial light.

3195 All Colors Mixed This mixture has been most carefully blended according to color values. All of the eleven named varieties are grown separately, and the proper quantity of each is put in this mixture to make a well-balanced display.

3182 Pastel Shades Mixed We have prepared this special mixture from the most beautiful shades of pink, yellow, and lavender only, with just sufficient white to effect a perfect color harmony. All dark shades have been omitted.

BURPEE'S PERENNIAL FLOWER SEEDS

Perennial Flowers are the hardy permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required before the plants produce their blooms.

Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the showy Golden Alyssum saxatile compactum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet L 26, "Perennials from Seed," will be sent free upon request.

With the perennials, we have included the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die. Make sowings of perennial flowers each year so as to always have them in your garden.

Average heights and blooming season are given in the descriptions.
Some variation is natural in different localities.

BURPEE'S DAHLIA ROOTS

Jersey's Beauty
Formal Decorative
Dahlia

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results. Cultural directions are sent with every order for Dahlia roots. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; I. D. = Informal Decorative;
C. = Cactus; S. C. = Semi-Cactus.
